#### **DETAILED ACTION**

1. Claims 1-31 are pending and have been examined.

2. Claims 1-31 are rejected.

## Response to Arguments

- 3. Applicant's arguments, see pages 7-10, filed February 13, 2006, with respect to the rejection(s) of claim(s) 1-24 under 35 U.S.C. § 102 and §103 have been fully considered and are persuasive in light of the amendment to the independent claims. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of what was well known in the art at the time of applicant's invention as evidenced by Batta et al. (US005262923A).
- 4. Applicant's arguments, regarding claims 25-31, filed February 13, 2006 have been fully considered but they are not persuasive. In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., USB flash bay includes a latching mechanism for securing the USB flash bay) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

Art Unit: 2112

## Claim Rejections - 35 USC § 102

5. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

6. Claims 25-28 and 30-31 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Atech Flash and their product "PRO II USB MULTI-SLOT CARD READER/WRITER" as evidenced by a product review on Steves-digicams.com dated May 09, 2002.

For claims 25 and 28:

A USB flash bay for an information handling system, comprising:

- means for an external drive bay disposed within the information handling system
   (paragraph 1 of page 1);
- means for a USB flash bay including a USB port and a flash card slot (paragraph 1 of page 1);
- means for integrating the USB flash bay in the external drive bay (paragraph 1 of page 1);
   and
- means for connecting the USB flash bay with the information handling system
   (paragraphs 1-2 of page 1).

For claim 26:

The USB flash bay of claim 1, wherein the USB flash bay is capable of integrating in at least one of a standard three and one-half inch external drive bay and a five and one-fourth inch external drive bay disposed within the information handling system (paragraph 1 of page 1).

For claim 27:

The USB flash bay of claim 25, wherein the means for a USB flash bay is a faceplate containing the USB port (figure on page 1; second figure on page 2; both figures on page 3) and the flash card slot (figure on page 1; second figure on page 2; second figure on page 3), wherein a USB hub is communicatively coupled with the USB port and interfaced with a flash card reader controller which is communicatively coupled with the flash card slot (observe the picture on page 1, a USB port [inherently connected to a USB hub] is seen on the faceplate of the PRO II. Furthermore, the PRO II connects to an information handling system through USB [shown as a USB port in the figure on page 3] thus reassuring the fact that a USB hub controller is present in order to facilitate data transfer via USB.).

For claim 30:

The USB flash bay of claim 1, wherein the USB flash bay is capable of being enclosed in a housing (paragraph 1, page 1).

For claim 31:

The USB flash bay of claim 1, wherein the USB flash bay is enclosed in a housing including a connector port adapter suitable for connecting with a variety of information handling systems

(As previously noted, the PRO II connects to the information handling system through a USB connection. USB is a widely accepted protocol that almost every information handling system supports, therefore the PRO II is suitable for connecting with a variety of information handling systems).

#### Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

7. Claim 1-3, 7-11 and 15-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Atech Flash and their product "PRO II USB MULTI-SLOT CARD READER/WRITER" as evidenced by a product review on Steves-digicams.com dated May 09, 2002 in view of what was well known in the art at the time of applicant's invention as evidenced by Batta et al. (US005262923A).

Claims 1-8, 9-16, and 17-24 are substantially equivalent and will be treated as such for the remainder of the Office Action.

For claims 1, 9 and 17:

A USB flash bay for an information handling system, comprising:

Application/Control Number: 10/664,388

Art Unit: 2112

Page 6

USB port [inherently connected to a USB hub] is seen on the faceplate of the PRO II.

a USB hub communicatively coupled with a USB port (observe the picture on page 1, a

Furthermore, the PRO II connects to an information handling system through USB

[shown as a USB port in the figure on page 3] thus reassuring the fact that a USB hub

controller is present in order to facilitate data transfer via USB.) the flash card reader

being operable as a USB mass storage device (as noted previously, the PRO II installs in

a computer system using standard USB Mass Storage device drivers and provides

Removable Disk icons representing each of the installed flash drivers);

a flash card reader controller communicatively coupled with a flash card slot (A flash

card reader controller is necessary to read/write data to/from the various memory cards

the PRO II supports. As such, the flash card reader controller is inherently present) the

flash card reader controller interfacing with the USB hub (As noted above, a USB is

inherently present to facilitate data transfer with the information handling system via

USB. Therefore, since the PRO II allows users of the information handling system to

read/write from/to various memory card technologies the flash card reader controller

must interface with the USB hub); and

a faceplate including the USB port (figure on page 1; second figure on page 2; both

figures on page 3) and the flash card slot (figure on page 1; second figure on page 2;

second figure on page 3), wherein the USB flash bay is suitable for being integrated in a

drive bay of the information handling system (paragraph 1 of page 1).

OFFICIAL NOTICE is taken in that it would have been obvious to one of ordinary skill in the art to include a latching mechanism attached to the PRO II drive in order to secure the flash drive in the computer tower as evidenced by Batta et al. (col. 7, II. 1-14).

For claims 2, 10 and 18:

The USB flash bay of claim 1, wherein the USB flash bay is capable of integrating in at least one of a standard three and one-half inch external drive bay and a five and one-fourth inch external drive bay disposed within the information handling system (paragraph 1 of page 1).

For claims 3, 11, and 19:

The USB flash bay of claim 1, wherein the USB flash bay is capable of connecting to a peripheral power source and universal serial bus (both figures on page 3; paragraph 2 on page 3).

For claims 7, 15 and 23:

The USB flash bay of claim 1, wherein the USB flash bay is capable of being enclosed in a housing (paragraph 1, page 1).

For claims 8, 16 and 24:

The USB flash bay of claim 1, wherein the USB flash bay is enclosed in a housing including a connector port adapter suitable for connecting with a variety of information handling systems (As previously noted, the PRO II connects to the information handling system through a USB connection. USB is a widely accepted protocol that almost every information handling system

supports, therefore the PRO II is suitable for connecting with a variety of information handling

Page 8

systems).

8. Claims 4, 12, 20, and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Atech Flash's PRO II as applied to claims 1, 9, 17, and 25 above, and further in view of Intel

(Communication and Networking Riser Specification Revision 1.2).

As noted above, the Atech Flash PRO II is a USB flash bay for an information handling system,

comprising:

• a USB hub communicatively coupled with a USB port (observe the picture on page 1, a

USB port [inherently connected to a USB hub] is seen on the faceplate of the PRO II.

Furthermore, the PRO II connects to an information handling system through USB

[shown as a USB port in the figure on page 3] thus reassuring the fact that a USB hub

controller is present in order to facilitate data transfer via USB.) the flash card reader

being operable as a USB mass storage device (as noted above, the PRO II installs in a

computer system using standard USB Mass Storage device drivers and provides

Removable Disk icons representing each of the installed flash drivers);

• a flash card reader controller communicatively coupled with a flash card slot (A flash

card reader controller is necessary to read/write data to/from the various memory cards

the PRO II supports. As such, the flash card reader controller is inherently present) the

flash card reader controller interfacing with the USB hub (As noted above, a USB is

inherently present to facilitate data transfer with the information handling system via

USB. Therefore, since the PRO II allows users of the information handling system to read/write from/to various memory card technologies the flash card reader controller must interface with the USB hub); and

• a faceplate including the USB port (figure on page 1; second figure on page 2; both figures on page 3) and the flash card slot (figure on page 1; second figure on page 2; second figure on page 3), wherein the USB flash bay is suitable for being integrated in a drive bay of the information handling system (paragraph 1 of page 1).

The PRO II however does not expressly teach connecting the information handling system to the PRO II though a connection other than a USB cable.

Intel teaches in their specification "Communication and Networking Riser" revision 1.2, PC users' demand feature-rich PCs, combined with the industry's current trend towards lower cost, mandates higher levels of integration at all levels of the PC platform (paragraph 2, page 9). As such Intel has defined a motherboard riser named the Communication and Networking Riser that supports audio, modem, USB, and local area network (LAN) interfaces of core logic chipsets (paragraph 1, page 9). By integrating the various interfaces into a standard motherboard riser baseline implementation costs are reduced (paragraph 1 and 4, page 9). Furthermore, the CNR specifically addresses noise problems by physically separating noise-sensitive systems from the noisy environment of the motherboard (paragraph 3, page 9).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to implement the Communication and Networking Riser of Intel into the USB flash

bay (PRO II) of Atech Flash such that system degradation with respect to increased noise is reduced while at the same time a lower bill of materials cost is achieved.

9. Claims 5, 13, and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Atech Flash's PRO II as applied to claims 1, 9, and 17 above and further in view of what was commonly known in the art.

As noted above, the Atech Flash PRO II is a USB flash bay for an information handling system, comprising:

- a USB hub communicatively coupled with a USB port (observe the picture on page 1, a
  USB port [inherently connected to a USB hub] is seen on the faceplate of the PRO II.
   Furthermore, the PRO II connects to an information handling system through USB
  [shown as a USB port in the figure on page 3] thus reassuring the fact that a USB hub
  controller is present in order to facilitate data transfer via USB.);
- a flash card reader controller communicatively coupled with a flash card slot (A flash card reader controller is necessary to read/write data to/from the various memory cards the PRO II supports. As such, the flash card reader controller is inherently present) the flash card reader controller interfacing with the USB hub (As noted above, a USB is inherently present to facilitate data transfer with the information handling system via USB. Therefore, since the PRO II allows users of the information handling system to read/write from/to various memory card technologies the flash card reader controller must interface with the USB hub); and

• a faceplate including the USB port (figure on page 1; second figure on page 2; both figures on page 3) and the flash card slot (figure on page 1; second figure on page 2; second figure on page 3), wherein the USB flash bay is suitable for being integrated in a drive bay of the information handling system (paragraph 1 of page 1).

The PRO II includes a single downstream USB port on the faceplate of the flash bay (figure on page 1; second figure on page 2; second figure on page 3;) for connectivity to a peripheral device. OFFICIAL NOTICE is taken in that it would have been obvious to one of ordinary skill in the art to include at least four USB ports on the faceplate such that the functionality of the information handling system is improved while at the same time providing enhanced connectivity to peripheral devices as evidenced by the Belkin Hi-Speed USB 2.0 Drive Bay HUB-F5U261 discussed in the previous Office Action dated December 14, 2005. Furthermore due to applicant's lack of response to the providing of the Belkin reference in the Office Action dated December 14, 2005 the common knowledge or well-known in the art statement is taken to be admitted prior art because applicant either failed to traverse the examiner's assertion of official notice or that the traverse was inadequate.

10. Claims 6, 14, and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Atech Flash's PRO II as applied to claims 1, 9, and 17 above, and further in view of Li (US 6,681,991 B1).

As noted above, the Atech Flash PRO II is a USB flash bay for an information handling system, comprising:

- a USB hub communicatively coupled with a USB port (observe the picture on page 1, a
  USB port [inherently connected to a USB hub] is seen on the faceplate of the PRO II.
  Furthermore, the PRO II connects to an information handling system through USB
  [shown as a USB port in the figure on page 3] thus reassuring the fact that a USB hub
  controller is present in order to facilitate data transfer via USB.);
- a flash card reader controller communicatively coupled with a flash card slot (A flash card reader controller is necessary to read/write data to/from the various memory cards the PRO II supports. As such, the flash card reader controller is inherently present) the flash card reader controller interfacing with the USB hub (As noted above, a USB is inherently present to facilitate data transfer with the information handling system via USB. Therefore, since the PRO II allows users of the information handling system to read/write from/to various memory card technologies the flash card reader controller must interface with the USB hub); and
- a faceplate including the USB port (figure on page 1; second figure on page 2; both figures on page 3) and the flash card slot (figure on page 1; second figure on page 2; second figure on page 3), wherein the USB flash bay is suitable for being integrated in a drive bay of the information handling system (paragraph 1 of page 1).

As shown in various pictures, the PRO II includes 3 flash card slots for connecting 5 flash card types. Therefore while the PRO II supports at least 5 flash card slots, it does not expressly teach using at least 5 flash card slots.

Application/Control Number: 10/664,388 Page 13

Art Unit: 2112

Li teaches a card reading device having a multi-functional connector. The card reading device (Fig. 1 and 2) comprises five flash card slots 11 for reading/writing to a variety of memory cards (e.g., SD, MS, CF, SM, SC, MMC, MD) (col. 2, Il. 33-43).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to implement a dedicated flash slot for each memory card type as in the card-reading device of Li into the PRO II of Atech Flash such that a larger quantity of memory cards may be housed and serviced simultaneously.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ryan M. Stiglic whose telephone number is 571.272.3641. The examiner can normally be reached on Monday - Friday (6:00-3:30).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rehana Perveen can be reached on 571.272.3676. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Application/Control Number: 10/664,388

Art Unit: 2112

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
